

Handicap Door Opener - Procedure for Turning ON

- 1- Test the door opener by pushing the handicap door button.
- 2- If it does not open, turn the small RED switches located above the door on the inside to ON.
- 3- Test the handicap door opener again.
- 4- Make sure the switches are turned OFF before you leave.
Test this by using the *outdoor* handicap door button. If the door opens adjust the switches until it does NOT open.
(Note: Leaving the switches on leaves the building unlocked and accessible to anyone who may try to enter it.)
